Sewage treatment with nothing to see, hear or smell!

Nothing to see

Septech's super strong concrete tanks have superior performance to plastic tanks and are totally underground so the only thing you'll see is your garden and the small, flat access covers. No unsightly pumps or boxes to ruin your view.

The small, stylish Septech system hi-tech LCD control panel is located unobtrusively on any outside (or inside) wall for you to monitor the operation of your treatment system.

The Septech Turbojet superior multi tank system also eliminates the problem of clogged sand filters and absorption trenches common to other on-site systems. This protects the important treatment and final irrigation pump out chambers from any contamination.

All mechanical and electrical components are made of non-corrosive materials for long service life. The Septech Turbojet pumps are specially designed and manufactured using stainless steel to prevent break down through condensation and corrosion.

And as a bonus, it is impervious to bushfire damage and distortion by soil movement as may be experienced with other systems.

We've thought of everything to make operation a breeze.

Nothing to hear

You can truly enjoy spending time outdoors because you'll never hear your Septech Turbojet. The entire system is run by a completely submersible pump that generates less noise.

The insulated single pump system also uses less energy, needing only 6 to 8 hours of operation a day for a full family home, so you'll use much less power than for a conventional 24 hour system.

Nothing to smell

Operation is as odourless as it is noiseless. The only output to come from your Septech Turbojet is clear water for irrigation! Water so pure that your garden will flourish from your choice of underground reticulation or drip feed plant watering systems.

The independent test results say it all. 'The Septech Turbojet is the Australian benchmark for consistent quality of effluent - water clean enough to irrigate your garden'.

Specifications - Turbojet 2000

The most efficient and economical domestic system.

Daily Treatment Flow	2000 Litres
Primary Treatment Tank Capacity	3200 Litres
Aeration Chamber Capacity	1880 Litres
Humus Tank Capacity	1320 Litres
Sampling Pit Capacity	740 Litres
Total Capacity	7140 Litres

Other standard Turbojet units available:
Series 3000 / 4000 / 5000

Larger commercial Turbojet systems designed and built to meet specific operational needs.

- ✓ EPA Approved
- ✓ Health Department Approved
- ✓ Australian Standards Approved
